Professional Engineers

Note 1. Re Fees.

- Donations to the IngAust Society are welcome from Prof. Engineers (either as once off donations or increased annual membership payments above the normal \$120pa), Employers and other interested organisations.

Definition of “Professional Engineer”. This was set as part of the early 1960s’ Professional Engineers Work Value Salary Case in the Australian Industrial Relations arena. Professional Engineers are people who hold qualifications for the achievement of GradIEAust or higher or equivalent. More recently, international qualifications certified within the Washington Accord, of which EA is a part, have also been included. Typically, these days such a qualification would be a graduate of a BEng degree from a University. Prior to 1980, other GradIEAust qualifications as certified by EA as being similar to the BEng degree at the time are also included (Eg Associate Diploma of Communication Engineering from RMIT awarded around 1960s – In more recent years the Associate Diploma title has been taken over by Engineering Associates to be used for some of their sub-professional qualifications).
